

## LITHIUM GREASE

It is a lithium soap grease prepared from qualified base oil and special additives, which is widely used in the industry. It is used in wheel bearings, central lubrication systems, ball and slide bearings of automobiles, commercial and off-road vehicles, agricultural and construction machinery that do not operate under very heavy load and high temperature conditions. It can also be used safely in electric motor bearings.

### Features and Benefits

- They provide the opportunity to work under impact loads with their superior extreme pressure properties.
- They extend bearing life by reducing fatigue and wear.
- They reduce maintenance costs, reduce malfunctions and increase production efficiency.

### Technical specifications

Method	Value		
Soap Type	Lithium		
NLGI	one	2	3
Penetration 25°C	310-340	265-295	220-250
Dropping Point, °C	Min.185	Min.185	Min.185
Colour	Yellow/Brown		

### Storage Information

-  Packaging; It should be stored in covered areas with tightly closed lids.
-  It should not be exposed to the direct effects of solar heat and heat sources.
-  For more information, refer to the Material Safety Data Sheet (MSDS).
