

## RUBBER GREASE

Rubberized grease is a water-resistant, multi-purpose calcium grease with a fibrous structure, produced with high quality base oils and special additives. It is suitable for use in low and medium speed bearings, low speed plain bearings and chassis applications where the operating temperature does not exceed 80°C. Thanks to its adhesion enhancing substances and fibrous structure, it adheres to metal surfaces, protecting the metal and preventing wastage.

### Features and Benefits

- It is resistant to water, heat and abrasion. It minimizes corrosion by preventing oxidation.
- It can be used in a wide temperature range.
- 

### Technical specifications

Method	Value		
Soap Type	Ca		
NLGI	one	2	3
Penetration 25°C	310-340	265-295	220-250
Dropping Point, °C	Min.105	Min.105	Min.105
Colour	Green		

### Storage Information

-  Packaging; It should be stored in covered areas with tightly closed lids.
-  It should not be exposed to the direct effects of solar heat and heat sources.
-  For more information, refer to the Material Safety Data Sheet (MSDS).
